

Windows of pairwise haplotypic identity by state lengths (L)

$L \in w_4$ here

Windows of pairwise haplotypic identity by state lengths (L)

Windows of pairwise haplotypic identity by state lengths (L) using the upstream and downstream regions of the focal allele

Case 1

$$y = ((L_1 + L_2)/50000) + 1$$

$L \in w_y$ here

Case 2

$$y = ((L_1)/50000) + 10$$

$L \in w_y$ here

Case 3

$$y = ((L_1)/50000) + 15$$

$L \in w_y$ here

Case 4

$$y = 21$$

$L \in w_y$ here
